

1. Project enna?

Indha project oru mobile application. Idhu researchers/students-ku research papers-a search panna, relevant papers recommend panna, organize panna help pannum.

Idhu Flutter + Python use panni develop pannirukanga.

2. Abstract – Simple meaning

Normal-ah research paper thedumbodhu romba time and effort aagum.

Indha application:

- Research papers search pannum
- User interest-ku suitable papers recommend pannum
- Similar topics-la irukkura papers-a identify pannum
- Papers-a category-wise organize pannum
- Papers save panna help pannum

So, manual research work-a reduce panni research process-a easy and fast aakkuradhu dhaan main idea.

3. Main Features

Intelligent Paper Search

- Research papers-a easy-ah search panna mudiyum.

Personalized Recommendation

- User-ku interest irukkura topic based-ah papers recommend pannum.

Semantic Similarity Analysis

- Rendu papers oda meaning/content similar-ah irukka-nu identify pannum.

Paper Categorization

- Papers-a different categories-la organize pannum.

Literature Storage

- Important papers-a save panni folders create panna mudiyum.

Tags & Notes

- Paper-ku tags and personal notes add panna mudiyum.

Reading Status

- Paper read pannitoma, pending-ah irukka-nu track panna mudiyum.

4. Problem Statement – Enna problem solve panrom?

Current research process-la:

- Paper search panna neraya time aagudhu.
- Relevant paper identify panna difficult.
- Normal search results user interest-ku correct-ah match aagama irukkalam.
- Related papers identify panna systematic method venum.
- Papers save, folders, tags, notes maintain panna convenient system venum.

Solution: Idhellathayum oru single platform-la combine pannradhu indha project-oda purpose.

5. Objectives – Project oda goals

Project oda main objectives:

1. Flutter + Python use panni intelligent research paper application create pannradhu.
2. User interest based-ah personalized recommendations kudukradhu.
3. Semantic similarity use panni related papers identify pannradhu.
4. Papers-a categories and folders-la organize pannradhu.
5. Save, tags, notes, reading status features provide pannradhu.
6. Manual research-ku thevaiyana time and effort-a reduce pannradhu.

6. Proposed System – Application eppadi work aagum?

Simple flow:

User → Paper Search → Semantic Analysis → Recommendation → Save/Organize

- User oru research topic/paper search pannuvanga.
- System relevant papers-a find pannum.
- Adhula semantic similarity check panni related papers-a identify pannum.
- User interest based-ah recommendations kudukkum.
- Important papers-a folders, tags, notes use panni organize pannalam.

7. Conclusion

Overall-ah, indha project research paper discovery + recommendation + management moonayum oru application-la provide pannudhu.

Idhanala:

- Relevant papers easy-ah find pannalam
- Similar papers identify pannalam
- Papers organize pannalam
- Research time reduce aagum
- Research productivity improve aagum.

🔥 One-line-la project meaning

“User-ku relevant research papers-a intelligent-ah recommend panni, similar papers-a identify செய்து, papers-ai easy-ah organize and manage panna help pannura Flutter + Python mobile application.”
